

INSATLL IMAGICK IN AMAZON LINUX

```
sudo yum -y install php-pear php-devel gcc ImageMagick ImageMagick-devel
```

```
sudo bash -c "yes '' | pecl install -f imagick"
```

```
sudo bash -c "echo 'extension=imagick.so' > /etc/php.d/imagick.ini"
```

 This is the cleanest way I found of doing it (under PHP 7.4 on Amazon Linux AMI 2):

15

```
sudo yum -y install php-pear php-devel gcc ImageMagick ImageMagick-devel
sudo bash -c "yes '' | pecl install -f imagick"
sudo bash -c "echo 'extension=imagick.so' > /etc/php.d/imagick.ini"
```

If you're using `php-fpm`, don't forget to restart it:

```
sudo systemctl restart php-fpm.service
```
