

Steps to change the IP address using Terminal:

Ref:

1. [How do I change the primary IP of my cPanel server? – cPanel](#)
2. [Linux & Unix Servers - How to change the primary IP address of a WHM/cPanel Server](#)

1. Change the Private IP address in the mainIP file. Use the following command to do it:
nano /var/cpanel/mainip

```
root@host:/home/centos
GNU nano 2.3.1 File: /var/cpanel/mainip
10.0.0.53
```

2. Change the Private IP(ADDR) and Nameserver(NS) in the wwwacct.conf file using the following command: nano /etc/wwwacct.conf

```
root@host:/home/centos
GNU nano 2.3.1 File: /etc/wwwacct.conf
HOMEDIR /home
CONTACTEMAIL
NS ns1.nextgensocialnetwork.com
ADDR6
SCRIPTALIAS y
NSTTL 86400
ETHDEV ens5
NS4
DEFMOD paper_lantern
ADDR 10.0.0.53
LOGSTYLE combined
CONTACTPAGER
TTL 14400
HOST host.nextgensocialnetwork.com
NS3
HOMEMATCH home
DEFWEBMAILTHEME paper_lantern
NS2 ns2.nextgensocialnetwork.com
```

3. Remove the previous address and the host with it
4. Replace the private IP with the current address.

```
root@host:/home/centos
GNU nano 2.3.1 File: /etc/hosts
127.0.0.1 localhost localhost.localdomain localhost4 localhost4.localdomain4
::1 localhost localhost.localdomain localhost6 localhost6.localdomain6
10.0.0.53 host.nextgensocialnetwork.com host
```

5. Restart the apache web server by using the command: `systemctl restart httpd.service`
6. Check the IP change using `ifconfig` command
